Angina tonsillaria		36

V It is remarkable that Mass & Swellings
occur in the throat in the Children more than
in any other part of the body. This fact
favours the ~~idea~~ opinion of Mr Webster.

The Ulcerous sore throat exists in three forms. These are

- 1 The ~~Ulcerous~~ Malignant sore throat.
- 2 The ~~Ulcerous~~ Scarletina anginosa, or what is called the Scarlet fever sore throat, and
- 3 The ~~Ulcerous~~ Boiles of Dr. Sipot, or the Angina suffocativa of Dr. Bard. —

I of the malignant sore throat.
This form of disease made its appearance soon after the plague disappeared in Europe, from which Mr. Webster has supposed it to be an evanescent form of that disease. It resembles it in appearing in middle latitudes, in the autumnal months - in having exacerbations at night, and in being attended with bilious discharges and in terminating in from three to five days! It is a very fatal disease often destroying thousands in a city, or country in a few months. I have seen

V prostrated in it. The pulse is ~~less~~ most
commonly typhus, but we now and
then find it typhoid, and in a few
cases I have known it to synochae &
synochus fortis in its first stage.

2

it epidemical in this city ~~now~~ about the year 1763. It prevailed chiefly among children, but I well recollect some adults were affected with it. Girls are more subject to it than boys, women than men, and the weak, more than the robust. I have known it to appear occasionally in sporadic cases and then suddenly disappear for several years. The same remark applies to all other malignant diseases. Their short and occasional visits seem intended to exhibit a renewal of their claim upon human life least in the lapse of 20 or 30 years they should lose their power over it. The system is generally very much ^{more} involved.

For a particular description of this disease I refer you to Dr. Lister's, Dr. Johnson's and Dr. Cullen's histories of it. It has been supposed to spread by contagion, but if it be a relict or modification

of the plague, its remote cause must be sought for in the atmosphere. In cases where a great deal of putrid matter ^{is deposited} is derived from Ulcers in the throat, it is probable the breath may convey the disease. In this case it is propagated by the contagion of excretion only, or perhaps it is excited by an active Odor awakening dormant miasma -ta in a predisposed system. The matter dis-charged from the Ulcer in this disease is so acrid as to inflame the nose & mouth in children and even to excoriate the fingers of a physician. No wonder therefore the odor from this matter excites the disease in ~~a predisposed~~ a habit predisposed to it by being impregnated with its miasmata. In favor of its spreading by a specific contagion, it is said to be taken but once, but this may be accounted for by children being the principal subjects of it, for as it appears

D
L

but even in 20⁴ or 30 years, the children
who have had it by becoming adults within
that time lose their predisposition to it from
age, and not from a previous attack of
it.

Its premonitory symptoms are languor,
or ~~or~~ unusual sleeplessness, watery eyes,
a stiff neck, a fetid taste & smell, and the
common signs of an approaching fever.
In this forming state of the disease, an
emetic often strengthens it in a few
hours. my preceptor in medicine employed
the Sulphate of mercury that is Trichette
mineral in doses from 1 to 3 grains for
this purpose, and with the happiest ef-
fects. None died who took it on the first
day. It seems to salivate not only the
throat, but the Stomach, and the whole
intestinal canal. ~~The ability of constipation~~
~~spasms this disease~~ After the disease is

5

formed the remedies should be

1 Bleeding if the pulse be Syncopa or Synœches
fortis. Be not deterred by what English ~~writers~~
Physicians have written against this
method from using it. Recollect the difference
of our climates, Ailments & habits of
men bled four times in a Syncopa case of
this disease and thereby saved my patient.

2 Emetics. These should ^{be} given in those
cases where the pulse forbids bleeding but
where the system requires some depletion.
They should be repeated daily until the
pulse is reduced to the typhus point. They
cleanse the throat, discharge bile - irritate
excitement, and prepare the way for the
exhibition of stimulating remedies. The
balsphate of mercury should be preferred to
all other emetics.

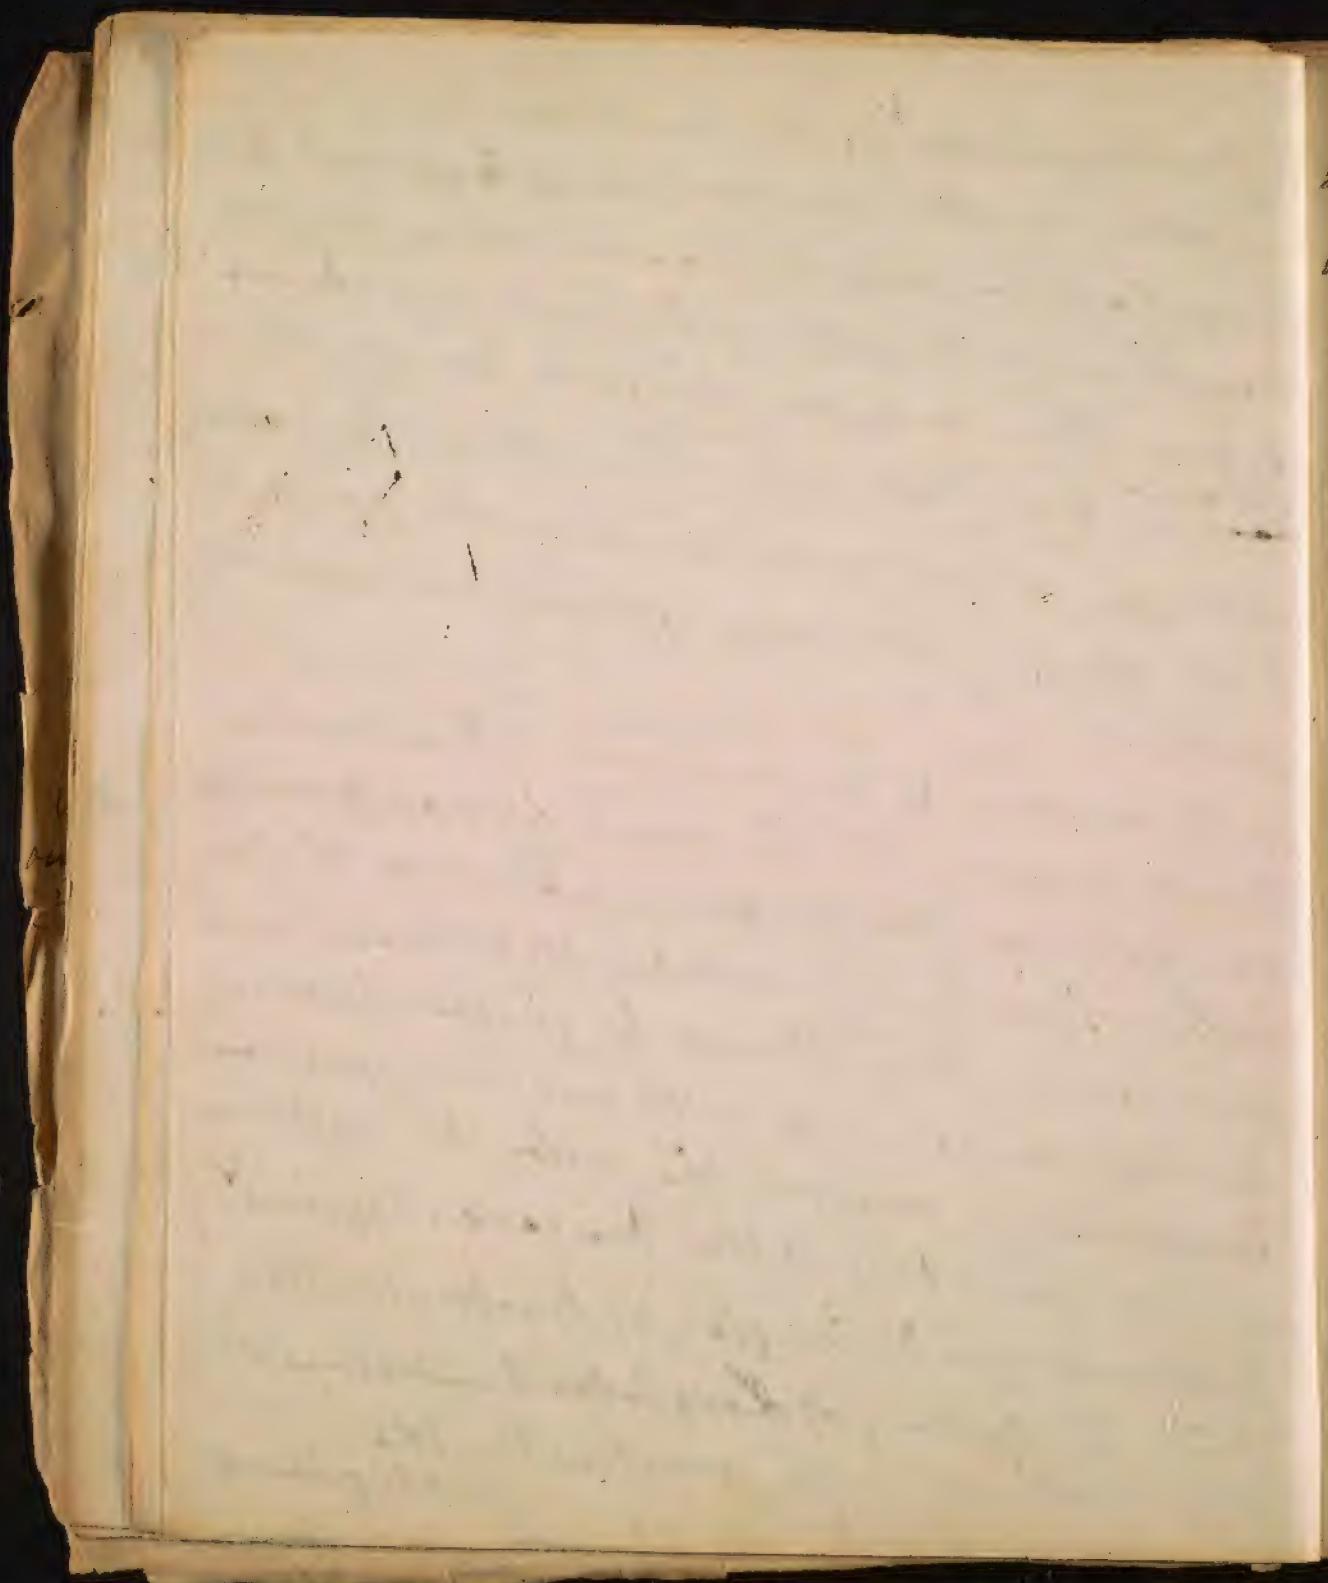

V pepper has been given with success in this disease in cases in which the stomach has rejected the bark, and even when the pulse has forbidding it. It is not only a ^{safe} ~~gentle~~ stimulant, but it cleans the throat in its passage into the stomach. The following is the formula in which it has been used in the West Indies.

Three table spoonful of ~~to~~ the Cayenne pepper - two of common salt - boiling water $\frac{1}{2}$ p. - when cold add to it $\frac{1}{2}$ p. of vinegar, and give to an adult a table spoonful every hour first shaking the vessel that contains them.

6

3 gentle purges. The bowels are generally
irritated in this disease, and disposed to a
diarrhea for which reason active purges
should never be given. Dr. Swithenby advises
to give them only on the first day of the
disease. A diarrhea after this should be restrain-
ed, for it not only weakens the patient,
but checks a salutary efflorescence upon the
skin.

4 Bark, wine & Laudanum. These remedies
should be given in the most liberal quantities
as soon as the pulse is reduced to the ty-
phus state by the remedies that have been
mentioned. They should be given from
the beginning, and without any previous
evacuations provided the pulse be typhus
on the first day of the disease. Cayenne
5 mercury. Dr. Douglas of Boston & after
him Dr. Ogden of Long Island introduced
this medicine into practice in the malignant

the throat. It should always be combined ^{it} with Theriaxa to prevent its passing out of the system thro' the bowels. The Theriaxa was moreover a useful addition to the cordials required by the disease. The mercury seldom failed of curing when it affected the throat where it produced a far up destructive action than the disease.

6 Fumigations of this a funnel of myrtle boiled in vinegar conveyed to the throat, also ~~or~~ gently stimulating jingles particularly sage tea sweetened with sugar are very useful. When they are ineffectual to cleanse the throat, a rag tied round a stick should be employed for that purpose. The bodes, if suffered to remain in the throat, by reacting, increases the disease. —

Thoughts
The greater the external swelling about the

le
by

neck and throat, the ^{if} less the danger. Sweating
is always favourable. The danger does not
appear to be lessened by the extent of the erup-
tion upon the skin.

The skin and even the nails sometimes
come of after a recovery from this disease.
A discharge now & then follows it, but it
is most commonly of a transient nature
except where it arises from the destruction
of the ^{Drum} membranes of the ear.

The disease has been prevented by
taking gentle purges, and by saturating the
system with mercury.

e

The Scarbitina Anginosa, -

is a disease of less ~~severity~~^{vigor} than the malignant sore throat, and attended with much less mortality. It is generally attended with a puking of bile, a shriveling efflorescence upon the skin, and with Ulcers in the throat - but Dr. Lydenham describes it as appearing ~~in one instance~~ without a disease of any kind in the throat. I have ~~ever~~^{but} once seen it in this form. It was while I was a student of medicine. ~~that~~ I well recollect the ~~hand~~ article peeling off so completely from the hand & arm of a young little girl who was affected with it that it resembled an inflated glove. The heat of the skin of course always is greater in this state of fever than ⁱⁿ any other. It sometimes rises to 112° . ^{I have seen several cases in which it was even up to} ~~the~~ ^{112^o ~~cases in which it was even up to~~}

V It sometimes kills in six hours, but it is remarkable while it now & then carries off two or three in a family, hundreds recover from it without an alarming dysentery. Thus it exists as the ^D ¹
Ulfstand happily expresses it "from a flea bite to a plague". Here you see the Unity of Epidemics. The same thing occurred in the bilious fever of 1802 in this city. While a few died of its most malignant state with what is called yellow fever, hundreds recovered so in whom it appeared in a mild remitting, and intermitting form.

with a yellow skin. 10
~~Dr Willan tells us it sometimes terminates~~
~~in pneumonia & mania in which cases~~
~~all its ordinary symptoms disappear.~~
~~Cases of it are often~~ It is said to be con-
tagious, but Dr Lebeden & Dr Willan say
it may be taken more than once. My
observation accord with thiers. I have seen
it several times in the same family in this
city. That it is an atmospheric disease
was ^{been} satisfactorily proved in a letter
from Dr Colder to Dr Hollingsill in which
he says it appeared when there was not
the least probability of its being imported.
When the excretions from the throat are
very offensive they probably excite dormant
emissaria, and hence the reason why
it often spreads through a whole family.
It terminates ^{very often} inaneous pitting
in the ^{lower extremities,} legs, and nose and then in pueri-
tis

pa

11

and mania also in abscesses in the neck
and in obstinate tumors in the submaxillary
glands.

The prominent symptoms of this
disease are nearly the same, as of the
malignant sore throat. An emetic has
the same good effect in preventing a com-
plete attack of the disease. When it is for-
med, the Remedies should be

1 Bleeding when the pulse is full or tense. I
have repeatedly employed it and at first
in opposition to the prejudices & clamors
of so many brethren who regulate their
practice by English books. I do not neglect

V of the Skin with cold Water. Dr
Lunie ventured upon this remedy
in this Disease with a great mass of
theoretical prejudice against it, but with
the happiest effects. I have imitated his
practice and with success. I was much
struck in observing the redness of the
skin to be increased, instead of being
lessened by the cold water. Resultat the heat
in this fever is greater than any other &
the water carries off this heat from the body.

that I ever lost a patient into for whom
I prescribed this remedy. This turn up was
perhaps owing to the disease being a safe
one when accompanied with inflammat.

Symptoms.

2 Inflammations. The sulphate of Lime should be
preferred for this purpose. They should
be repeated two or three times in the
course of the disease.

3 Purges. They should be of a unius kind.
4 Cold water applied to the skin ablation
5 Blisters. They should be applied first to
the lower extremities when the disease at-
tacks the head and breast.
6 Medicines calculated to promote perspi-
-ration.

7 Mercury so ~~was~~ combined as to di-
-pose it to act upon the throat.

8 Irrigations such as were given to

for the malignant sore throat. and
of Bark, Wine and Laudanum. I have
seldom found these medicines necessary,
the pulse seldom descending to the typhus
state in which case only they are indicated.
I think I have known them hurtful in
every other state of the pulse.

Signs of a favourable issue of this disease
are 1 a dry and general red color of the skin.
none died of this fever when it ^{in over forty} appeared ^{with}
out any affection in the throat.
2 swellings of the lower limbs are favourable.

Unfavourable signs are

- 1 Great restlessness, or jactation of the body from
one part of the ~~body~~ ^{foot} to another.
- 2 Coldest ~~that~~ ^{Foot} obstinately cold.
- 3 Abscesses in the neck. I lost two patients
in whom this symptom occurred.

4

5

5

5

5

5

4 a yellow color ¹⁴ of the Skin. I never
saw a recovery with this symptom.
5 Insensibility of the stomach discovered
by fingers making no impression
upon it. Dr Willan says he never saw
a recovery where this was the case.

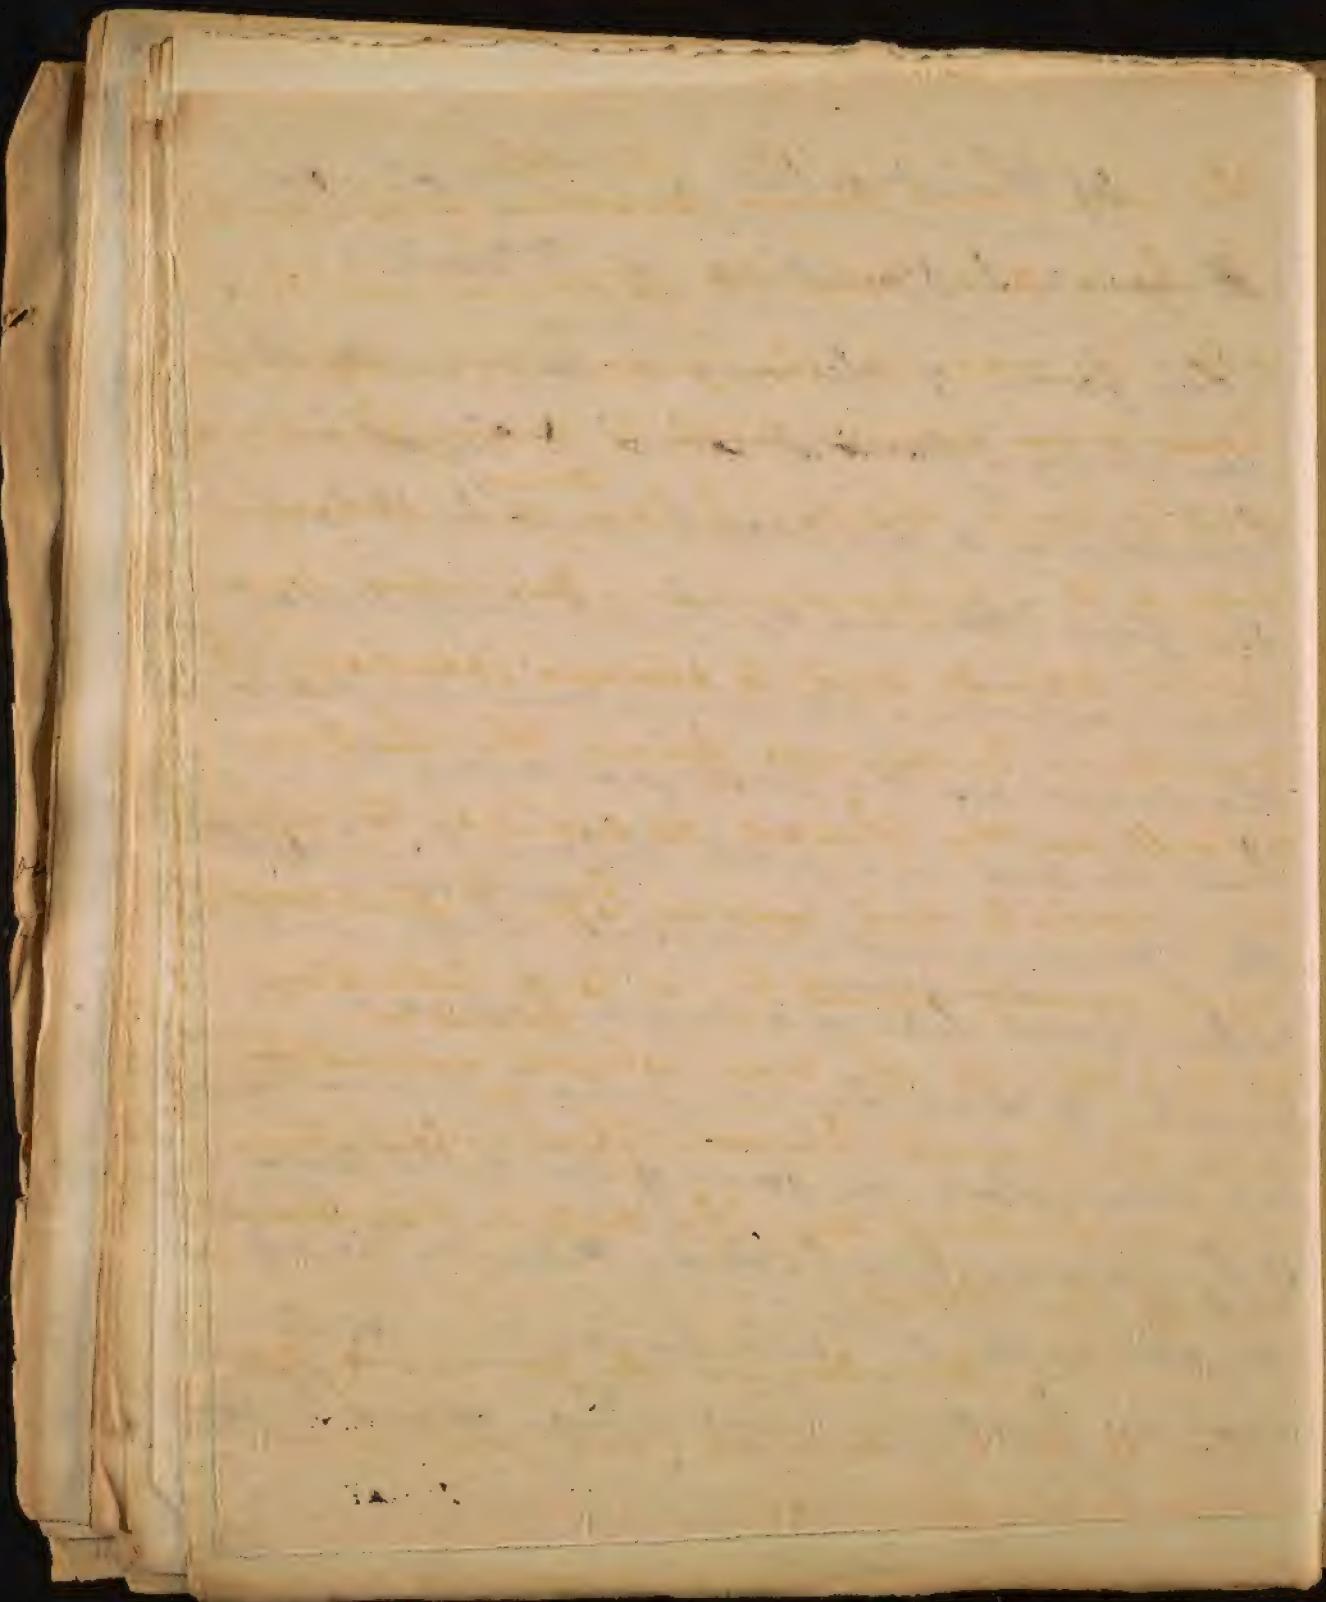

The swellings of the limbs sometimes
require the aid of medicine. They generally
yield to purges, and small doses of Nitro.
The means of preventing this disease
are the same as those for preventing the
malignant sore throat. Dr Sims says gentle
purges effectually prevent it in persons
who are exposed to it. —

For a more minute account of
this disease I refer you to Dr Willans
upon it, and to Dr Cullen's first lines.

of the Diseases of Dr Tippot, or
Anemia Supplicativa of Dr Bard.

This form of Ulcers,^{soothroat} is accurately de-
-scribed by Dr ~~Bard~~ ^{and} Dr Tippot in
his Advice to the people, and by Dr Bard in
the first Volume of the philosophical
transactions. Its symptoms are nearly
the same as the malignant sore throat,
but its seat is a little different. It affects
the Trachea and Bronchis chiefly, and
when fatal ^{sometimes} leaves a membrane in them
similar to that which I shall presently
say takes place in some of the fatal cases
of Cynanche trachealis. Patients die suf-
-focated with it - and hence one of its
names. Swellings, and Ulcers occur behind

16

the case - and hence ~~another~~ ^{its other} name.
I have once seen it epidemic in this
city. It was in the year 1772. Steps of
~~bone~~ ^{bone} proved fatal to many Children
and to some Adults. I have ^{since} seen sporadic
cases of it. A spontaneous lachrimation some-
times attends, and is always salutary. A
matter is discharged from the nose
as well as the throat so acrid as to inflame
the nostrils and upper lips. I once saw
death nearly induced by a large collection
of matter in the nose which ^{seemed to} extended
into the frontal sinus. There is sometimes
a large swelling on the outside & anterior
part of the throat.

The Remedies in its forming state
should be an emetic, and gentle sweat.

when the disease is completely formed,
the Remedies should be

- 1 Bleeding if the pulse be full or tense.
- 2 Emetics. The Sulphate of mercury th? be preferred for this purpose.
- 3 gentle purges.
- 4 Blisters especially behind the ears. we thus second the efforts of Nature, and thereby save the trachea & bronchii.
- 5 Mercury. By means of this medicine when determined to the throat, we follow an effort of nature to throw off the disease by means of a Iahivation.
- 6 Irrigations & gargles are less useful in this disease than in the two preceding ones, - from the Ulcers being generally ^{repeated} beyond this action, but they the tonics and

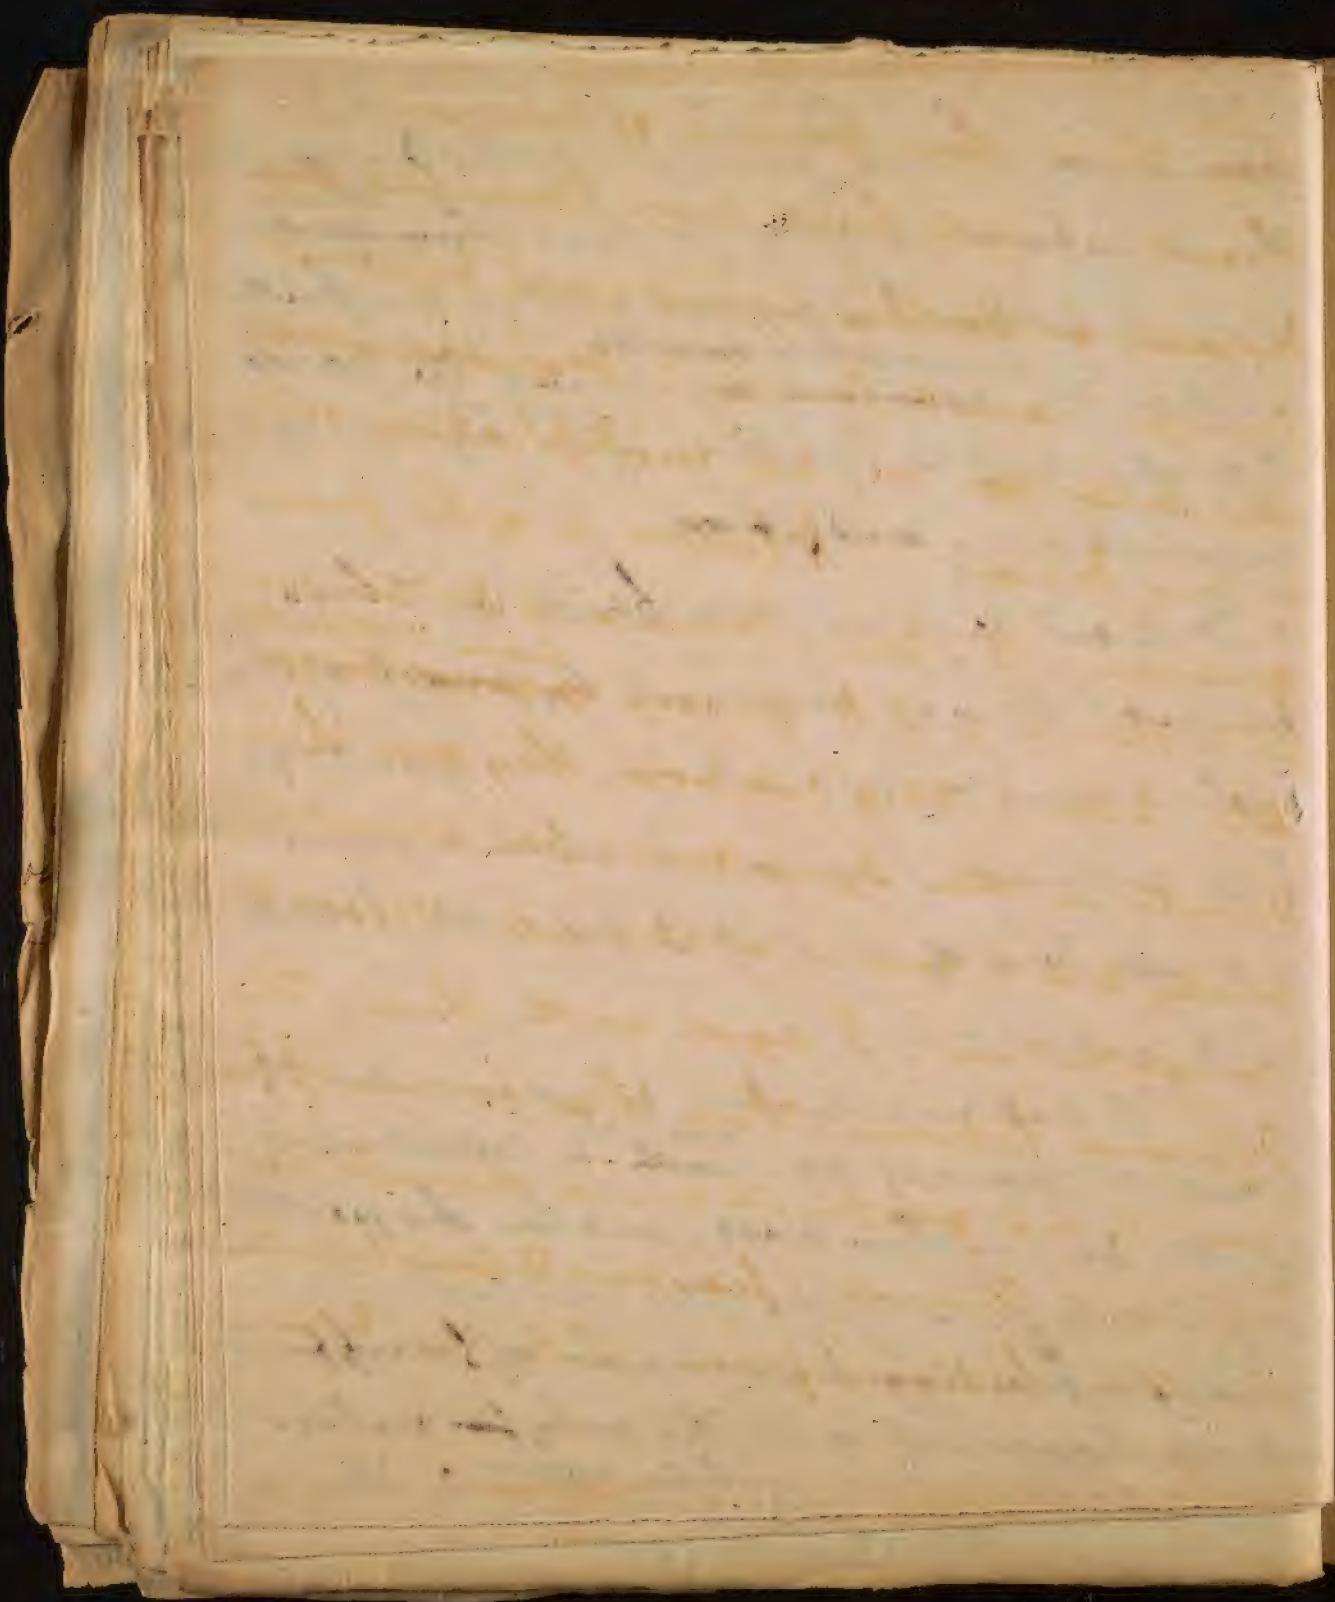

v Its prophylaxis is the same as
the other forms of sore throat.

18

fancies sometimes partake of the Disease in
the wind pipe in which case those ^{are} ~~are~~
local remedies are proper. They are ^{translating} ~~sacrificing~~ ^{useful}
useful by ^{translating} ~~sacrificing~~ ^{an} action to parts
less essential to life than ^{a part of} the organs of
respiration, and those

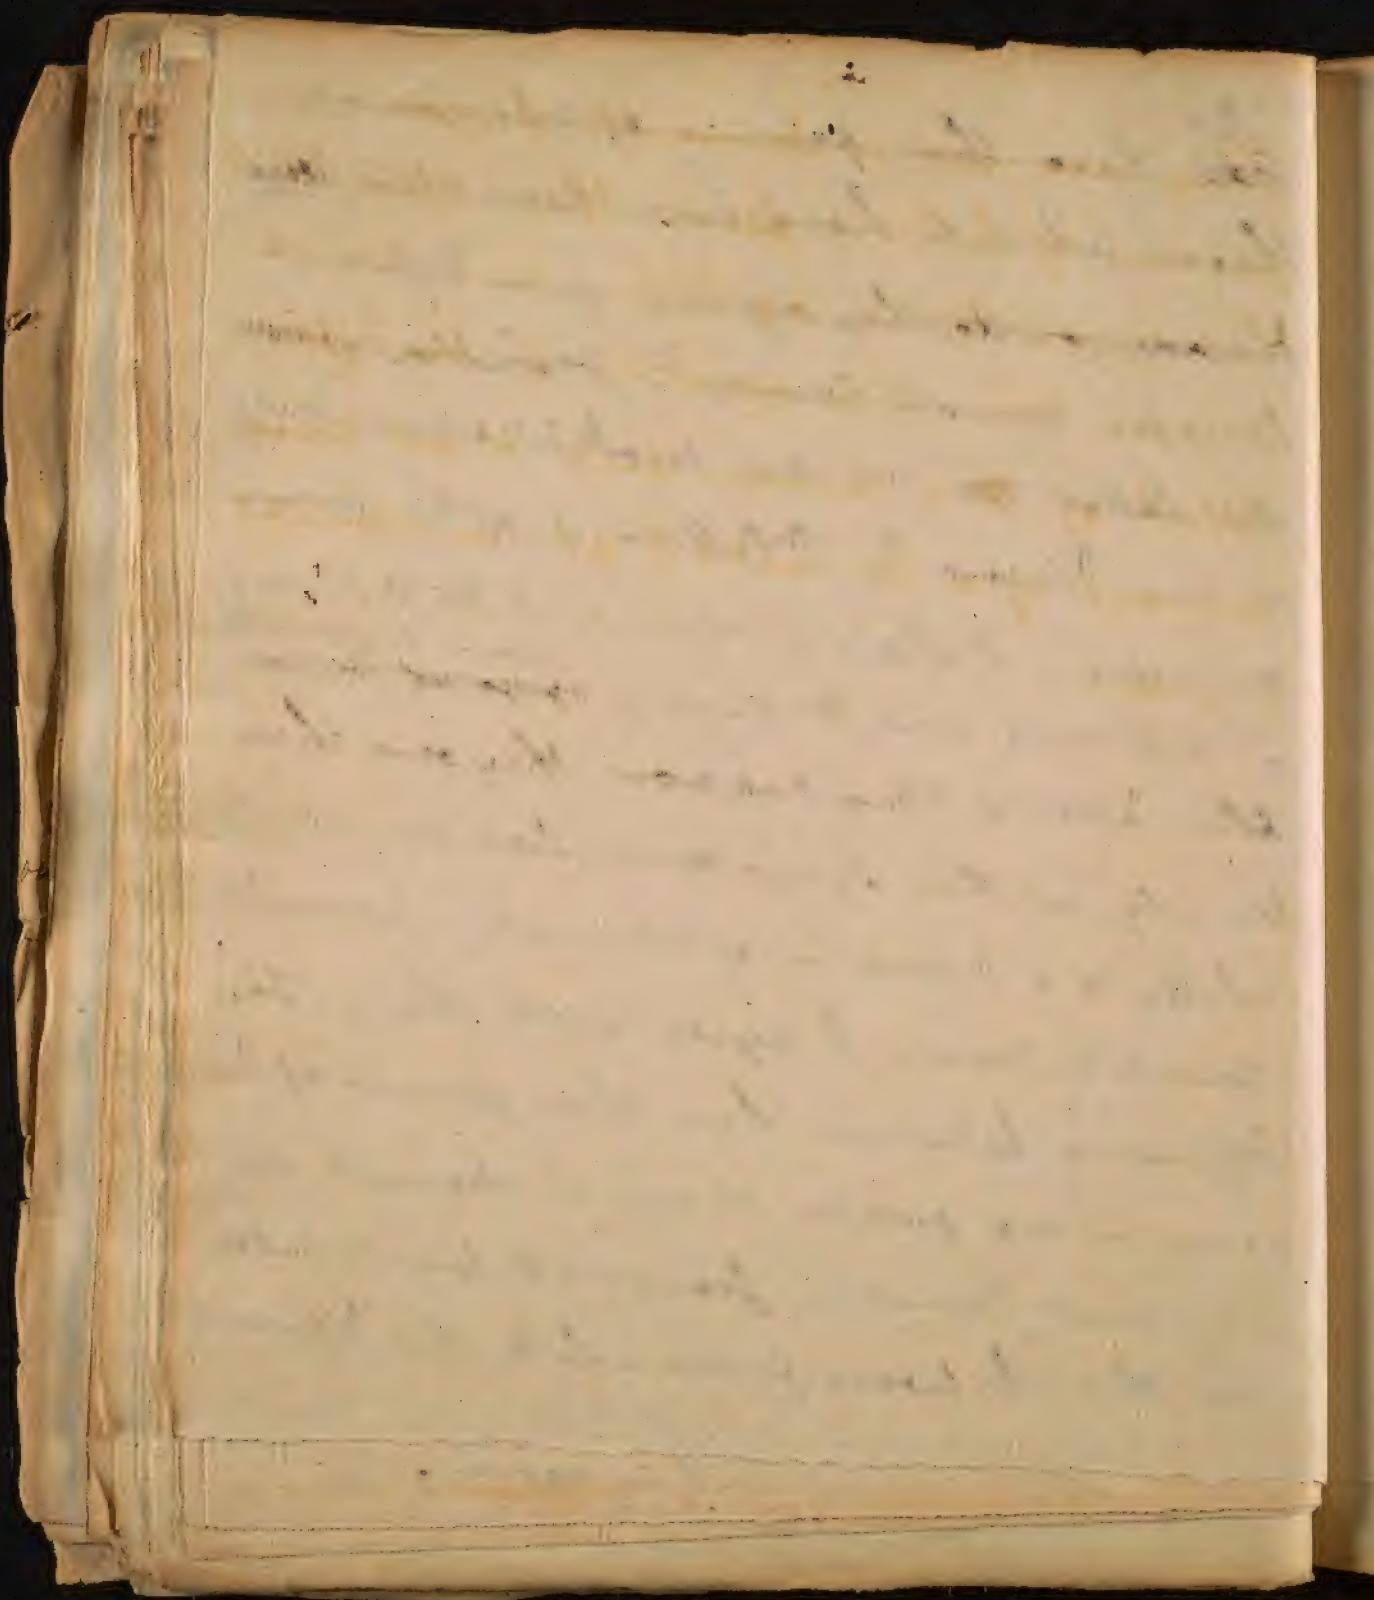

I Dr Bard commends back in this
disease. It was employed by most of the
physicians of our city in the year 1792
but without success. I did not prescribe
a single dose of it, and I did not lose a
single patient in it.

I had nearly lost a young lad of
about 15 years of Age ^{who had} with a collection of
matter ⁱⁿ in his nose, and in the parts
above and around it. He was saved by
excising a ^{bit} ^{bit} bruising by means of Snuff
which happened to be the only ~~the~~ medicine
medicine in his room. V

14

Do these three forms of ulcers arise
that which have been described, ~~the~~
diseases or do they depend upon different
specific remote causes? Dr Bellino of
the latter ~~are~~ or are modifications only
of one disease? Dr Cullen is of the former
opinion. Dr Stoll of Vienna, & Dr Heberden
Dr Withering and Dr Gregory ^{have supported} ~~support~~ the
the latter. They suppose they owe their
variety in their symptoms, fat & mortality
wholly to a difference of climate, seasons &
constitution. I agree with them. The
difference between those three forms of dis-
ease, is no greater than is observed in
different climates, seasons & constitutions
in the bilious fever. like the different
~~ways in which various diseases~~

They are all of domestic origin
forms of bilious fever, they often blend
themselves together, but like the
bilious fever they appear to ^{be} ~~the~~ different
effects of one cause, and that cause
always of a domestic & atmospherical
nature. —

— you will receive it with

V

Int
3

V ! It is a disease of Childhood chiefly, but it now & then affects Adults. I have seen 8 cases of it in young people in all of whom it terminated favourably - One in a woman of 70
most likely 1809 June.

2 Its causes are 1 primary - cold and moist air ^{induce} ~~act in this way~~ - hence it is most common in moist & cold seasons & countries. Once saw it induced by a dash of water thrown accidentally upon a girl of five years old returning from School. I have lately seen induced in a lady by the fumes of white paint.
3 ~~to~~ It is induced by causes w^t act in a secondary manner. There are several other diseases ~~translatable~~ to particularly to the small pox - measles - all the forms of sore throat - aphæ - rhinitism and catarrh. The last ~~is~~ most frequently induces it. In those cases in which it is said to be epidemic I believe it arises

✓ daily in some cases when when
ante & post mortem.

✓ I have given one instance in which
it terminated fatally in consequence of
a seizure.

wholly from Catarrh. This has been
the case during the present winter 1815.

- It is a higher grade of Influenza. It
is most dangerous when it is the effect of
a translated disease.

~~4th~~ It is sometimes a lymphomatous disease
from an over exertion & fumes. I once
saw a fatal case of it in a boy from
overdistending his stomach with buckwheat
cakes. His lungs & wind pipe had been
debilitated by a previous disease.

~~5th~~ It ~~never~~ comes on gradually & suddenly,
& terminates in from one to 20 days. I
have seen ^{two} chronic cases of it - one
ended in a recovery - the other died on
the 17th day. ~~Also~~ I have heard of two
other chronic cases of it in this city both
of which ended fatally. It ~~invariably~~

6 V It is often attended with intermissions,
and exacerbations. In these cases
~~beginning of the bunchy~~
~~the~~ ["] seems to be affected with
the spasmodic form of Disease.

5. That it is generally, but not always attended with a frequent or tense pulse - now with other signs of ordinary fever.

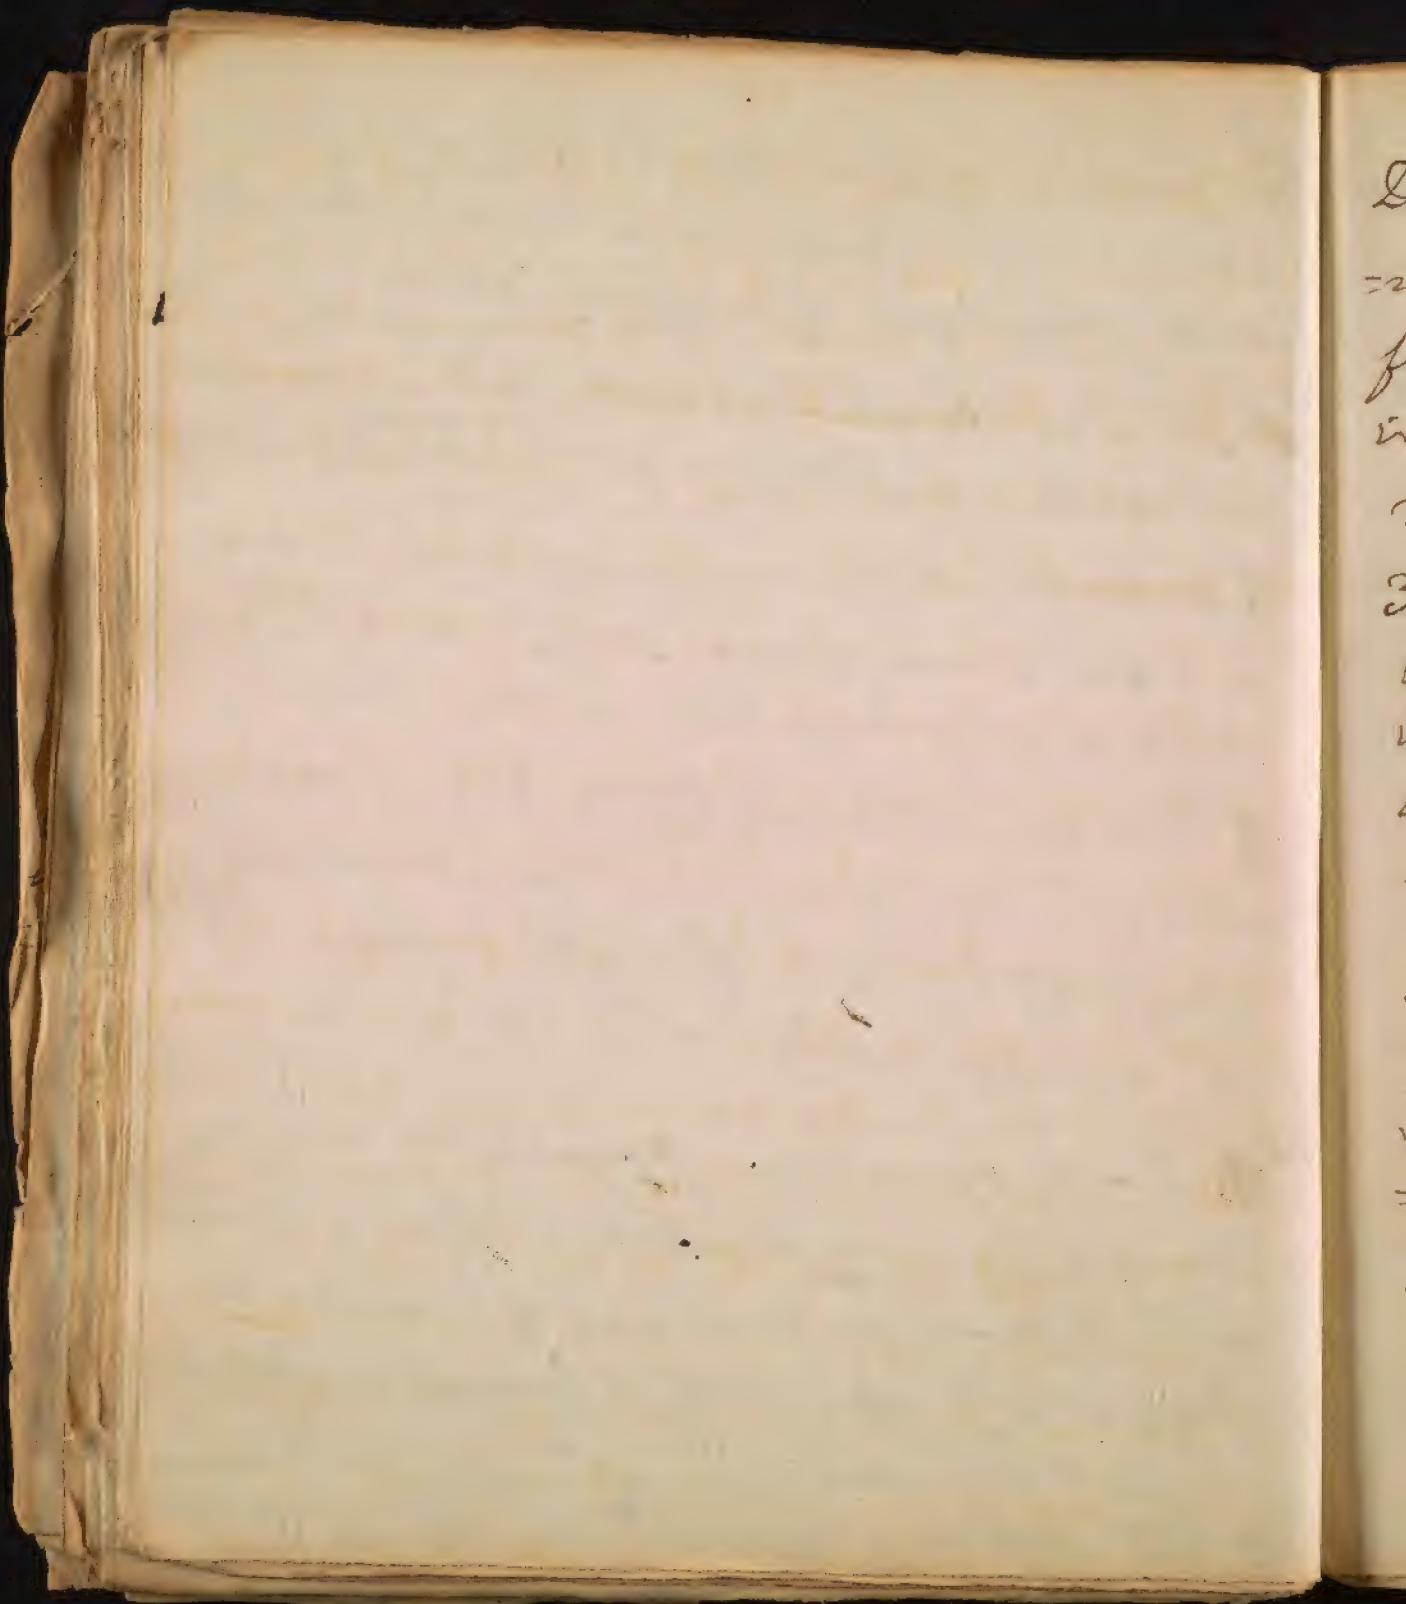

✓ It is rarely attended with delirium. Dr Michaelis says the mind is frequently elevated in it.

8 Children who have once had it, are subject to it for 5 or 6 years. I have known one instance of its being taken a dozen times.

9 It is sometimes a filial disease. Three and four of a family are now & then carried off by it in successive years in the same family.

10 Death sometimes occurs after an apparent recovery has taken place. It even occurs after expectation of recovery & fragments of a remembrance have afforded hopes & expectations of a recovery.

11 A diarrhoea is generally a fatal sign in it.

- Dissections show us the following Appa-
ratus : 1 no sign of disease of any kind,
from morbid excitement transcending
inflammation. ^{Here, it is} ~~is known only~~ "dry disease".
2 Inflamed spots spread over the Trachea.
3 ~~Some~~ A liquid matter said to be serum,
but - it is lymph not yet converted
into membrane.
4 small Ulcers in the trachia. This is
taken notice of by Dr. Cheyne.
5 a membrane of different degrees of density
~~so~~ similar to that which is formed after
in the brain - pleura & intestines after in-
flammation pervading the larynx-trachia
and bronchiae wholly or partially. This
membrane by a chemical analysis ~~possesses~~
possesses all the properties of the white of
an egg. It is insoluble in cold, and

✓ It may perhaps add to our knowledge
of this disease that two cases are upon
record of dogs having died with it. A
membrane formed from inflamⁿ was
found in the trachea of each of them.

✓ It is to be lamented that
~~as~~ all these S. graptions usually come
on in the night and in course

25

hot water. It dissolves readily in a diluted alkali. By levisitation, it yields a carbonate of soda, and a phosphate of lime.
~~[Schwartz's for. of fourth part.]~~

Now its causes - symptoms and the effects as exhibited by digestion Dr Darwin has called it "a plausy in the Trachea", and Dr Frank a "Trachitis".

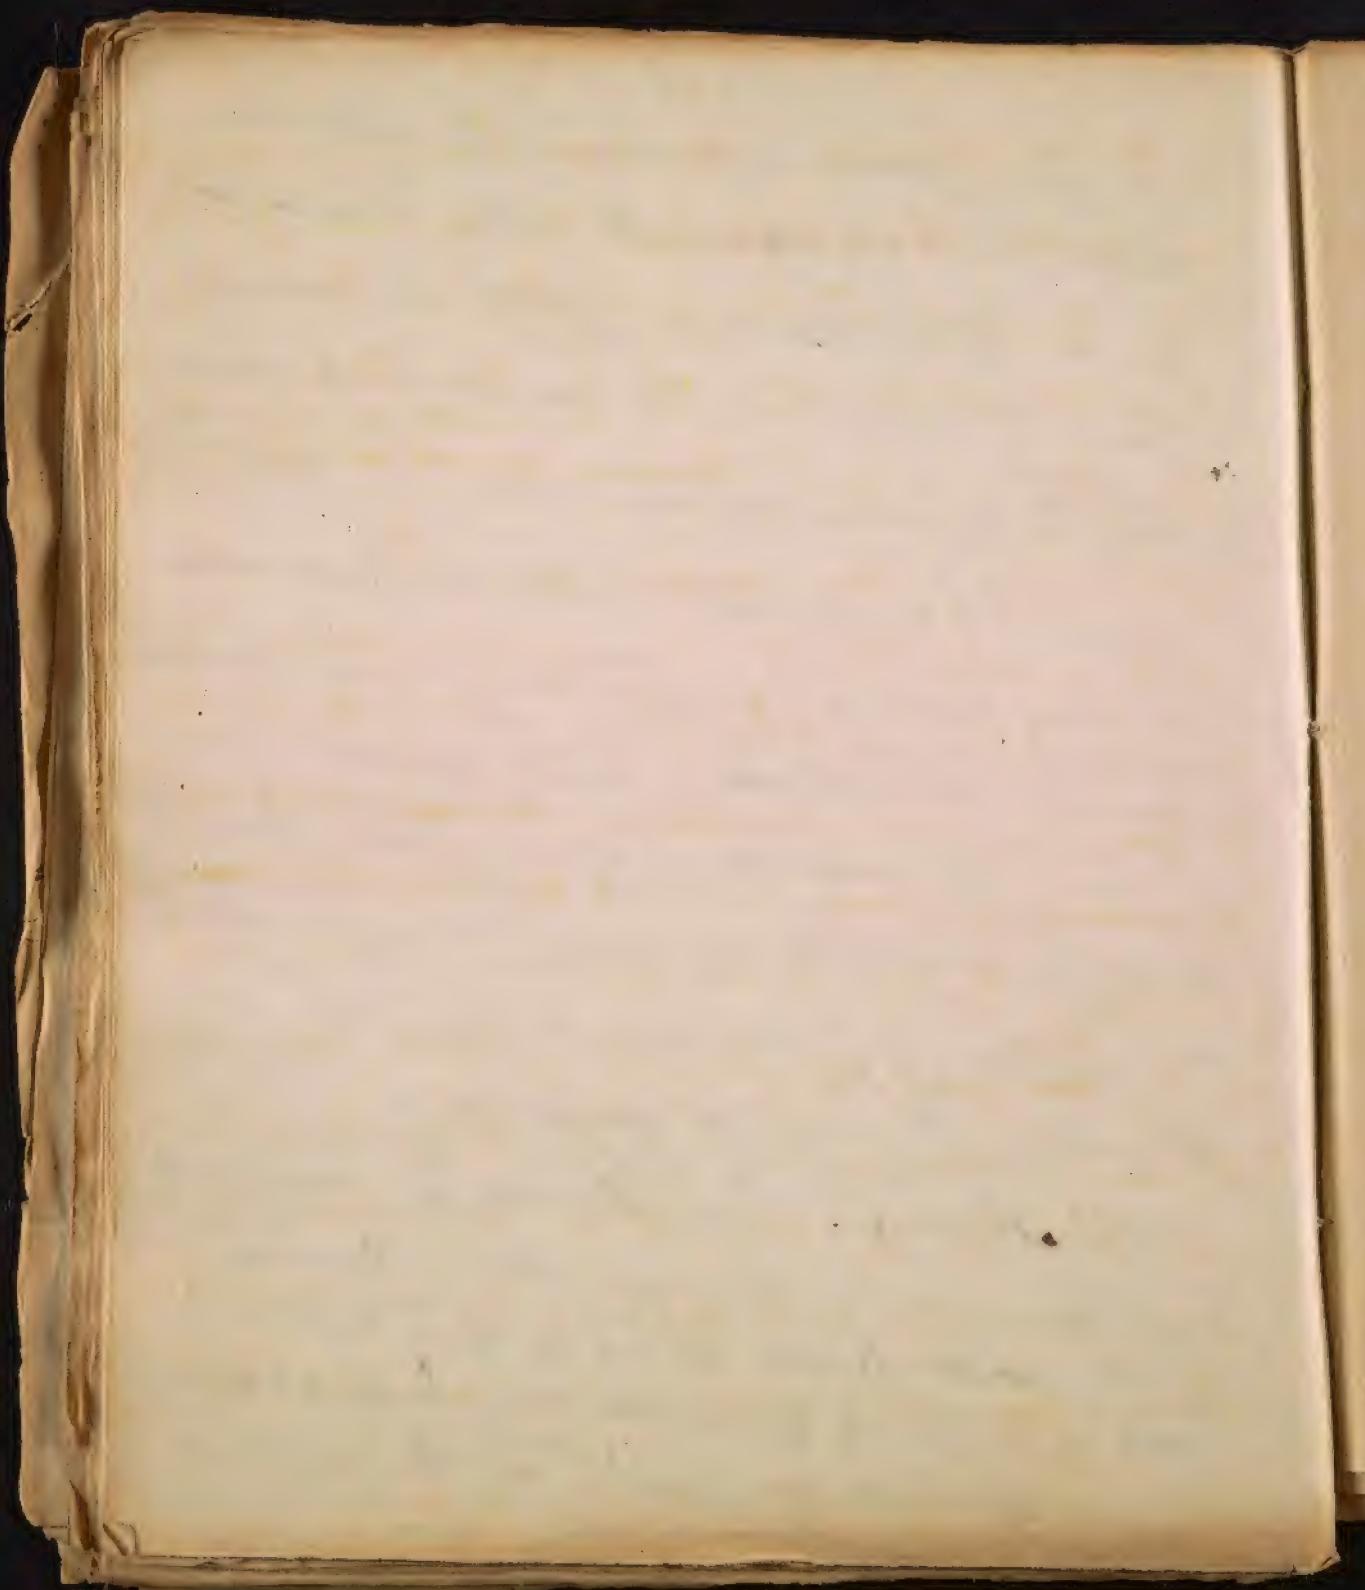

Now proceed now to the cure of this disease. But first let us inquire has it any premonitory signs? yes it has. They are heaviness & redness of the eyes - unusual dryness or dulness - a shortness ^{with a little barking note} hoarseness, & all with ^{it} without fever. In this feeble & forming state of the disease, an extract of Ipceaum ^{or} Squills - or Tartar Emata with

v It is to be lamented that those
premonitory signs of the disease too
often come on in the night, and
hence they are not so often met w/
by the remedies for that I have menti-
-oned & used with so much success.

a few grains of Calomel & Senna fails to extinguish the disease in a few hours. If the Calomel fail of opening the bowels, a purge ^{should} be given afterwards. In this way, I have prevented the formation of this disease in many, perhaps in a hundred instances, - and at least a dozen times in my care of my own family, without the aid of any other remedies.

After the disease is formed - the Remedies should be ~~so so so~~

1 Bloodletting. This should be prompt and copious, or often repeated, in consequence of the part affected being so essential to life, and of its being from its size & cartilaginous nature so much ^{out} of the great

circulation. no age however young or feeble should protect the disease from the lancet. Dr Physick bled a child of but three months ^{three times} old in one day in this disease and ~~thereby saved its life.~~

2 Emetics. Those who give this remedy is indicated by the sympathy which exists between the Stomach & the trachea
 2 by children ~~is between the appendix~~
~~is most common~~ bearing emetics so ~~well~~
 much better than grown people. and
 3 by ^{this} good effects. They often cure the
 Disease when given in its early stage without
 the aid of any other remedy. The
 more prompt and active the emetics the
 better. Senna, and Tartar emetic ^{should} ~~are~~

+ Mrs Wix

v Lost thirty ounces of blood. —

be prepared for this purpose. When they fail recourse should be had to the finger or a feather. I once saved the life of a lady in this city who appeared to be nearly expiring with this disease by exciting a vomiting by means of a feather thrust down her throat. All the common emetics had been given to her without effect. She had previously my
The emetics should be repeated daily, and even two or three times a day in the course of the disease.

3 Purges. These should be calomel and jalap. Calomel should moreover be given in large doses in order to produce a counter action & secretion in the

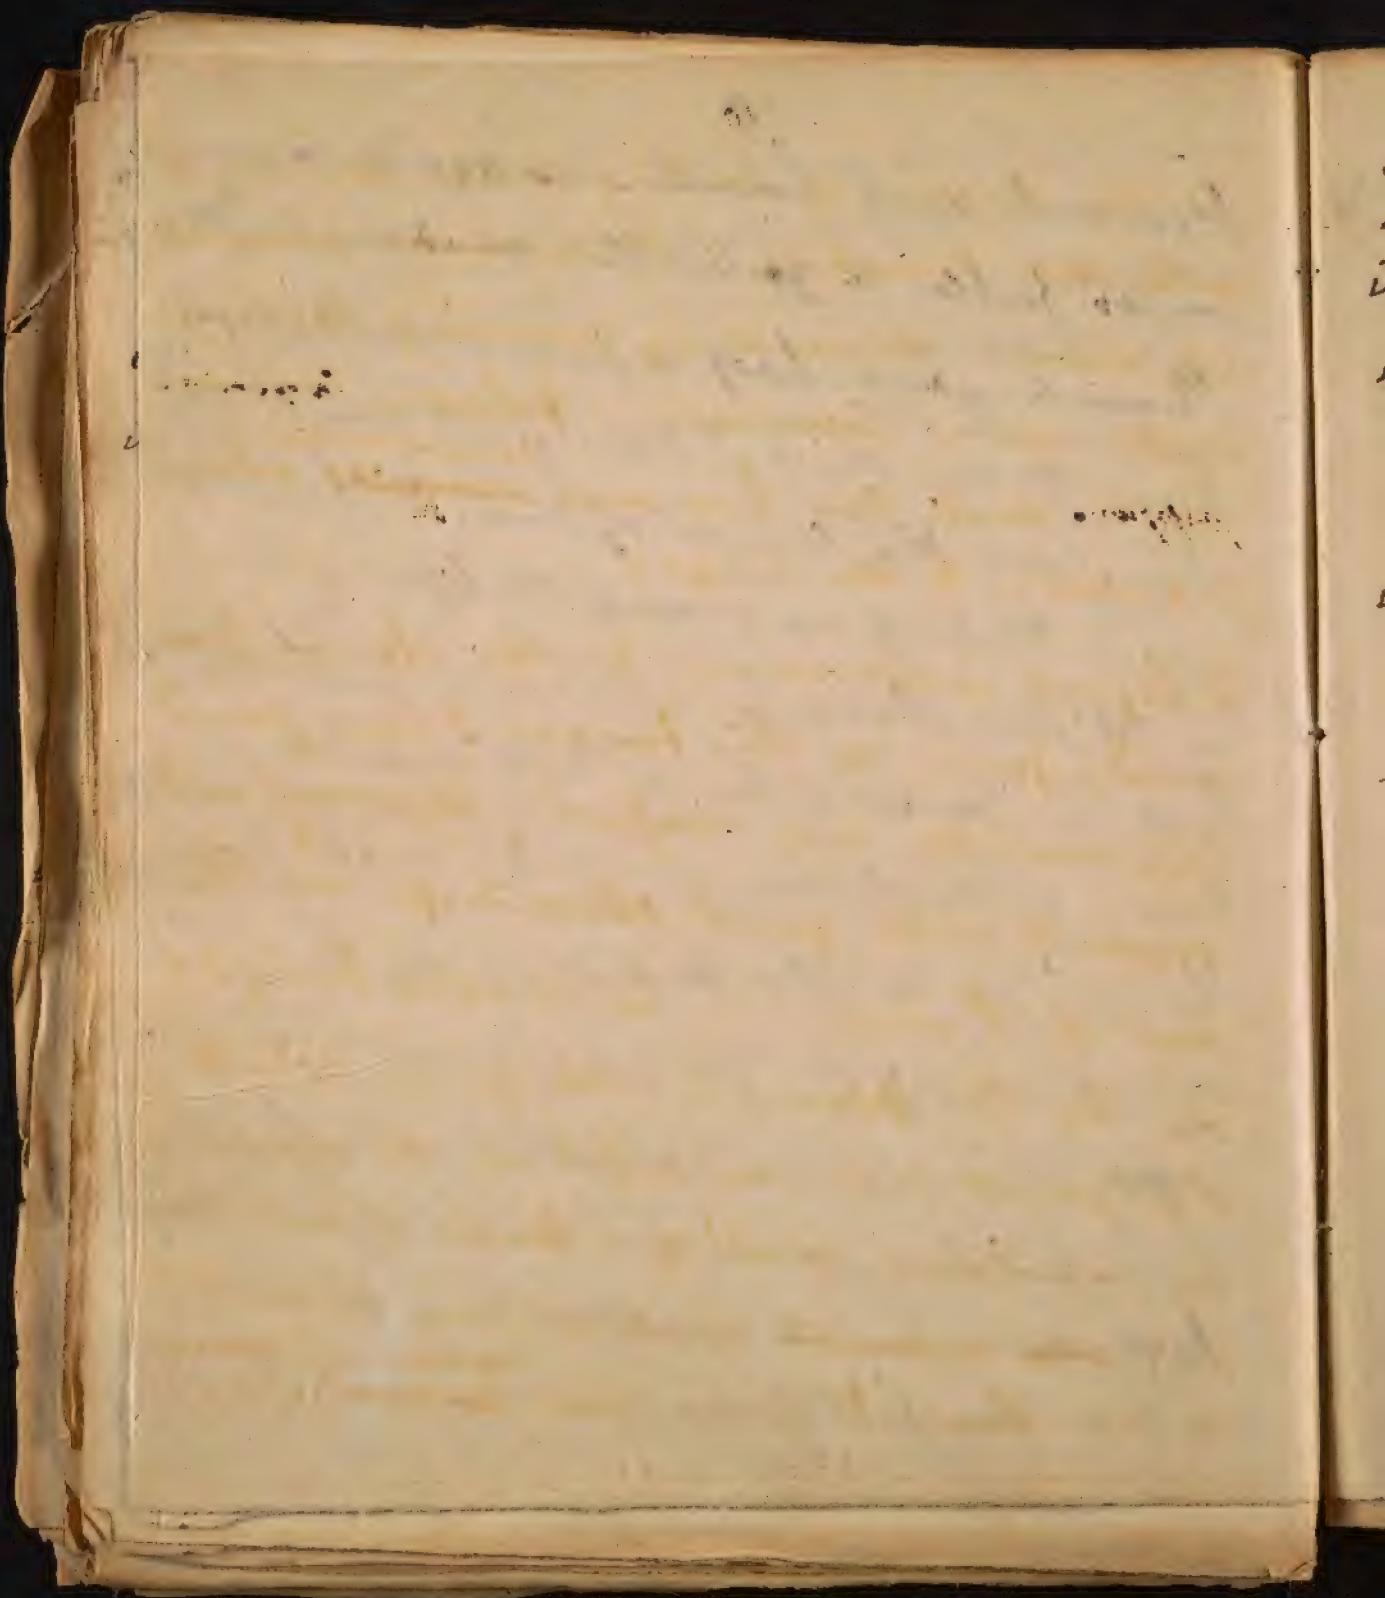

I have been afraid of having claimed the original
use of the ~~remedy~~^{Latent} in the Lymanche Trichialis.
This just now
- ~~He~~ ~~the wood~~ lying ~~gent.~~ are not ~~among~~ ~~the~~
~~in the Lymanche trichialis to Dr the Bond in~~
~~possession of many Villas.~~ In the 398th page of
the 4th Volume of my Virginia ^{soon took}
find the following ~~expressions~~ words. To Dr H:
Bond, of the city of Philada is indebted for
the general introduction of memory into
general use in the practice of medicine.
He called it "a mortification remedy" &
prescribed it in all the diseases which re-
sisted the common modes of practice.
He gave ^{it} liberally in the Lymanche tra-
chialis. I have put up many hundred
doses of it by order of my pupils in medie-
cine between the years 1760 & 1766. & He
taught the use of it from Dr Bond. I
adopted it from them.

29

Stomach and bowels - no age is too young
or too feeble to forbid this medicine. Dr
Physick gave half a dram in divided
doses to the child I have just now men-
tioned in the course of one ^{day}, & thereby
aided bleeding in saving its life. — ✓

4 Blisters should be applied to the throat,
but in cases which tend rapidly to
death a poultice may be made from
the inside to the outside of the throat
by means of the flour of mustard.

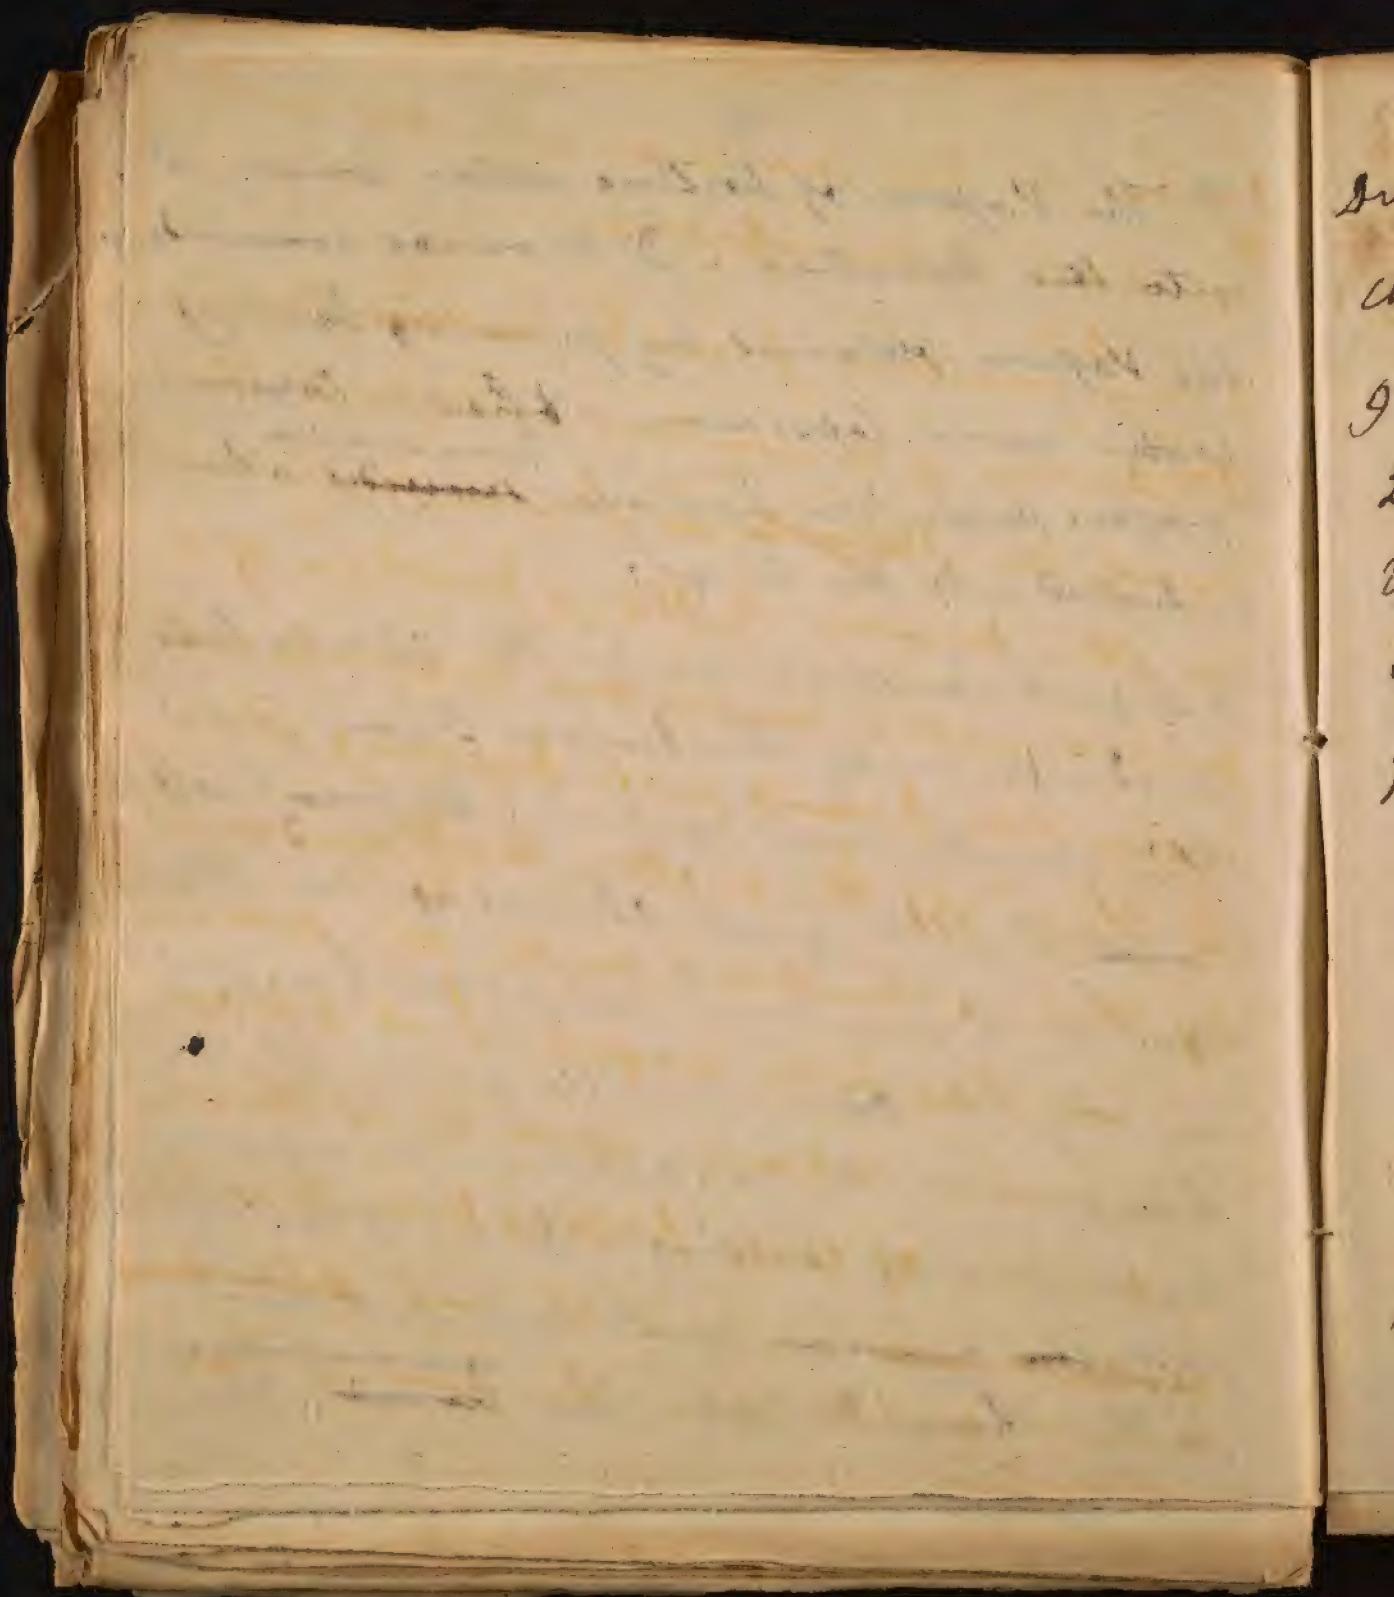

5 ~~the~~ Stimulating cataplasms to the feet.
6 The peritoneum and warm bath. They
both determine to the skin and thus
relive the Windpipe.

30

The vapor of boiling water conveyed
into the trachea. Dr Monroe comments
the vapor obtained by pouring boiling
water upon capsicum - that is cayenne
pepper. Wrote Air has ever ^{I once tried} succeeded when
inhaled into the lungs.

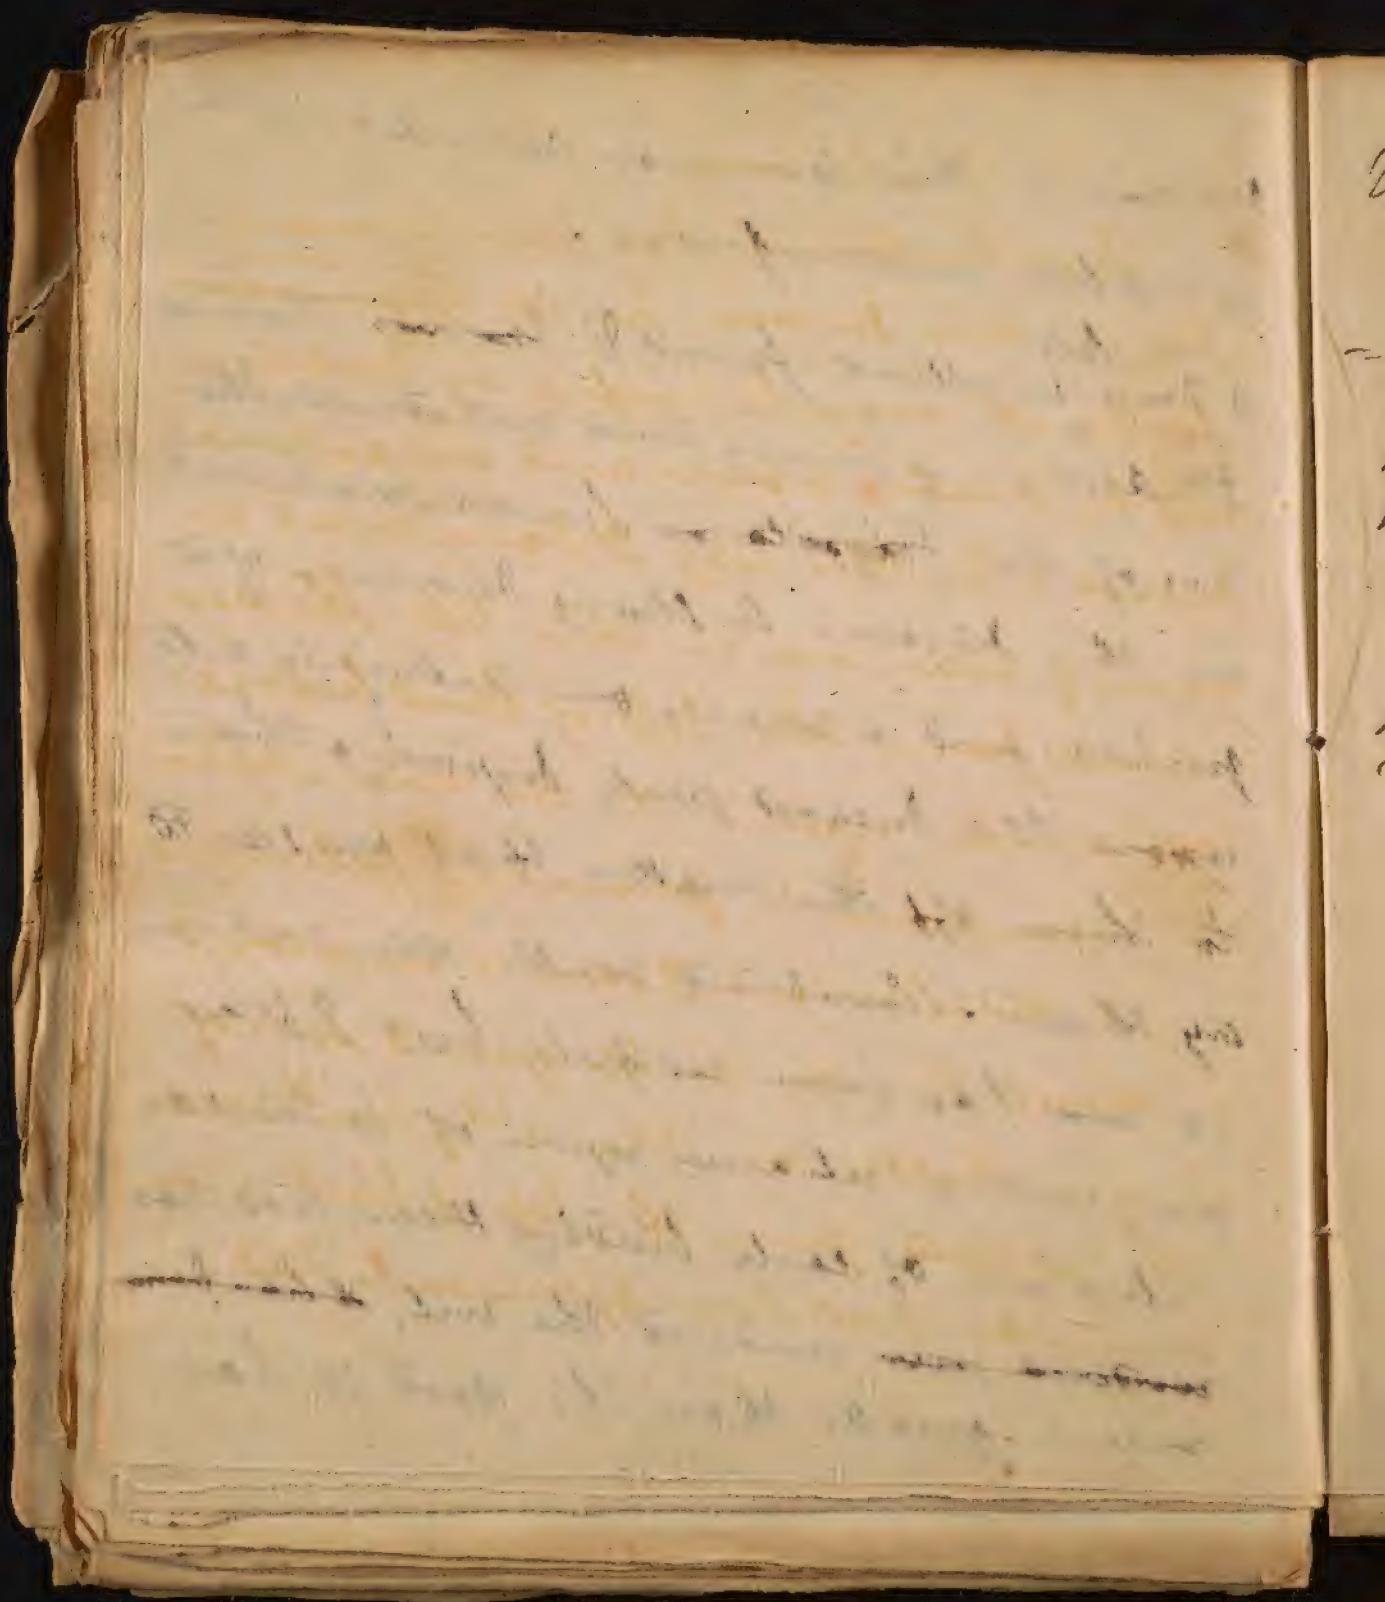

8 Liquefied Sardarum. In the Clonic spas-
modic form of this disease I have found
this remedy very useful. It was used
with it with great advantage in the
case of Gymnarchus trachialis brought
on by the odor emitted from white
lead paint. It was aided in its effects
by previous bleeding - Spirit of Nutmeg
and the external applications of mustard
to the throat & feet. The ^{intoxicating} ~~tannin~~ The

31

disease in this case was attended with
complete interruptions.

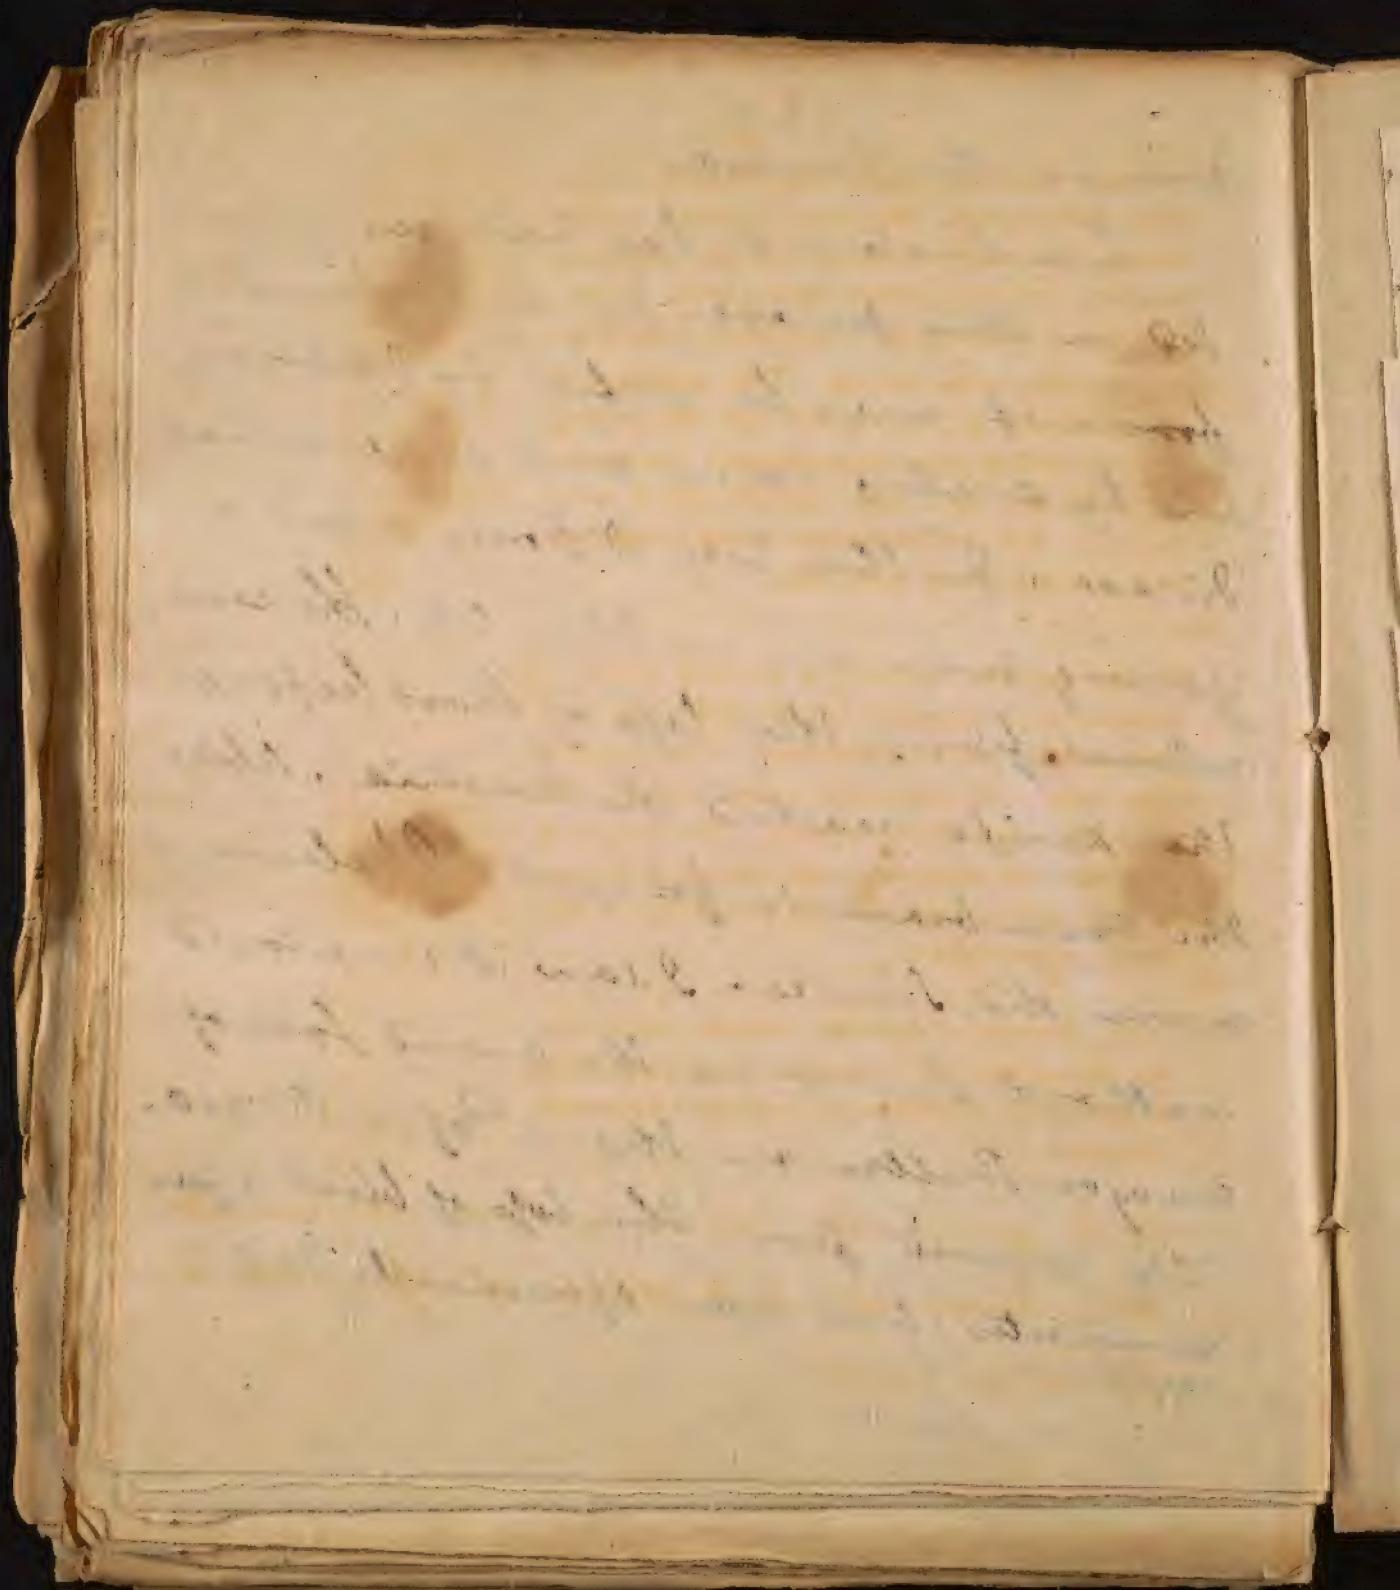

I my late excellent friend & former Chaplain
Dr Archon of Maryland introduced the
use of the ~~Podophyllo~~ Smecha Snakeroot
in this disease. A strong infusion of it
pushes, and a weaker one certainly acts
upon the diseased parts disengaging them
to throw off the matters that are suited
by them. Combined with other medicines
it ~~is~~ has been useful, but I fear
an undue reliance upon it to the ex-
clusion of early bleeding & venetics, has
~~wounded~~ wounded the wit, it ~~be done~~
much greater than the good it has

32

Done in this disease.

Trachotomy has been recommended in this disease. In its ^{infantile} form it may be useful by depletion, and by creating a new and an external disease. In this way Dr Dosity cured a young woman in this city. She was relieved from the loss of blood before the knife reached the trachea. After the membrane is formed, I believe it's never did service. I saw it employed without success in the grand son of Major Butler on the 2nd of Jan^y 1810. He rallied from the loss of blood a few minutes, but soon afterward died.

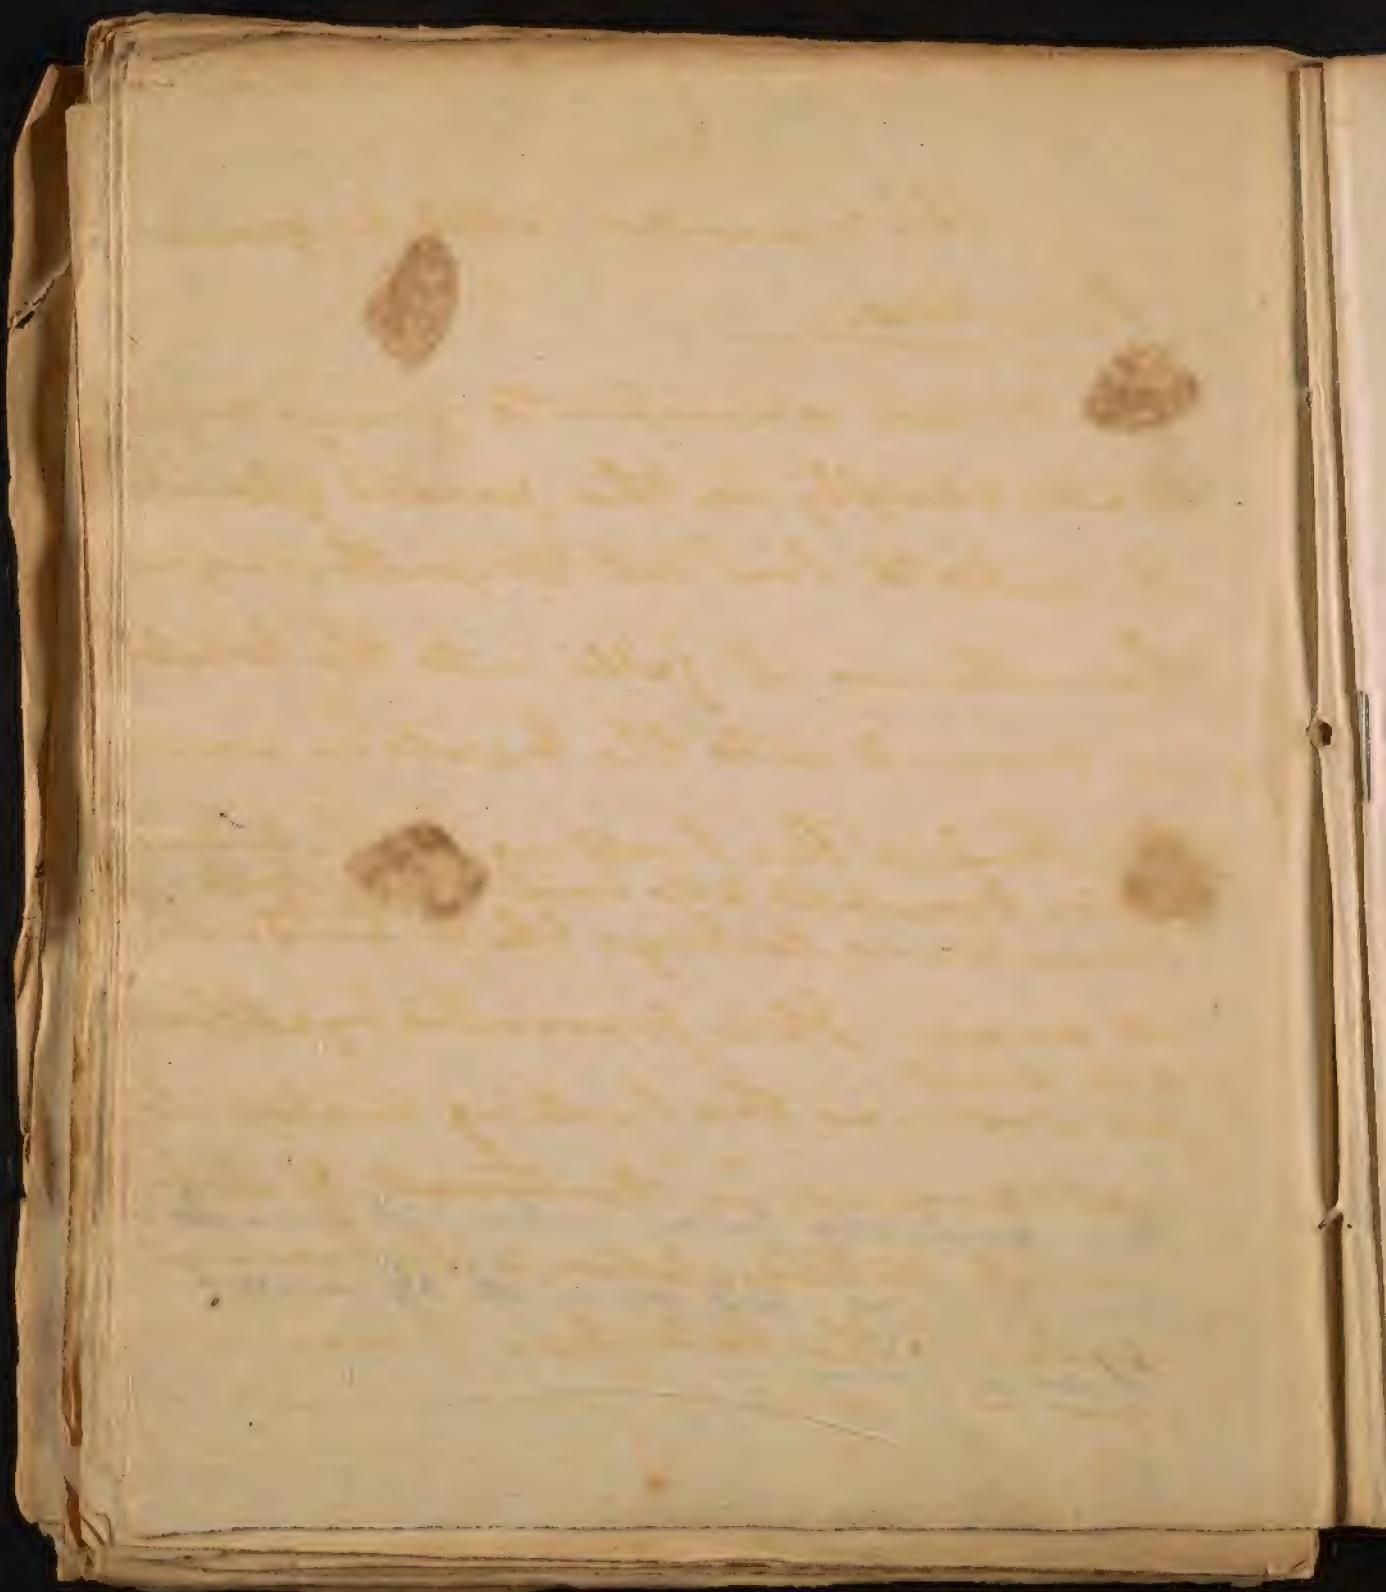

I once attended a man from Virginia, of the name of Bampfield, who, after an attack of this disease, was much distressed with the stertorous breathing and cough which belong to it. I suspected both to arise from a membrane formed by inflammation in his trachea. This membrane I supposed to be in part detached from the trachea, from the rattling noise which attended his breathing. He had used many remedies for it to no purpose. I advised a salivation, which in less than three weeks perfectly cured him.

= The cynanche trachealis is attended with most danger, when the patient labours under a *constant* and audible stertorous breathing. The danger is less, when a dry stertorous cough attends, with *easy* respiration in its intervals. The danger is nearly over, when the cough, though stertorous, is *loose*, and accompanied with a *discharge* of mucus from the trachea. //

An eruption of little red blotches, which frequently appears and disappears two or three times in the course of this disease, is always a favourable symptom.

It is generally fatal when it succeeds other diseases, and when it assumes a chronic form. —

The mumps called Angina
Parotidea.

A disease common to young people situated chiefly in the parotid glands. It yields to low diet & gentle purging. Sometimes it falls into the testicles in men, & into the breasts in women.

In Boosie the swelling in the testicle is again translated to the brain where it kills. It sometimes destroys the ^{testicle by} ~~testicle~~ withering it away. It is prevented by a Broder to the throat as soon as the swelling makes its appearance ^{in it} ~~in the~~ throat. It also prevents its translation to the brain when applied to the testicles. It has proved a good ^{in the winter of} 1804.5 - & sometimes required Dr. - which was cured suddenly by leaches.

Angina pharyngea.

It occupies the whole pharynx.
 - Its cure is ~~of~~ liquid prunes - low
 diet, and Blistering its forming state
 is gorgies of Brandy ^{or} Wine simple or
 mixed with water, & Hartsorn
 & Sweet Oil applied to the ^{the} outside
 of the throat. After it is formed,
 vs. liquid prunes - low diet, &
 Blisters around the throat.

~~Are~~ the 3 forms of sore throat ^{which are} attended with
Webs only higher grades of this form of Angina?
 - ~~Are~~ several analogies of other forms of fever
 make this probable. I. G. The bilious fever, may
 even the phthisy, in their highest grades put on
 malignant & dangerous appearances. The thin
 covering of the throat - perhaps disposes it to Webs
 more than other parts of the body where ^{it is} inflamed?

F.R.

+ but without affording any relief. [Disputed
with Dr. Dow & Dr. H. in Capt. Barney's Case.] It
generally affects Adults, & even more than
Women, and even of robust constitutions,
more than such of as are of weakly.

It thus used in many Clydesdale 80².

V This disease prevails among horses
by the name of the Poangis. Dr. White
says it is always hurtful in it. It
never cures itself by protraction.

Angina tonsillaris

This disease is seated in the tonsils &
as they are of a soft & spongy nature, they
favour its rapid course from the facility of
liquid effusions in them, the formation
of pus in so rapid manner that we
^{Sometimes the tonsils burst into little Ulcers + I formerly}
are seldom able to prevent it. I would
bleed in it, but failing of resolving the
inflammⁿ: by it I have desisted from using
it except where there is danger of suppⁿ:
— After suppuration has begun, it
protracts the its breaking. The loss of
a few teaspoonfuls of blood by a puncture
in the tonsils gives more relief than $\frac{1}{2}$ 斤
from the Arm. gentle purges & low
d^rit are proper. When it is ripe, it may
be opened with ~~an~~ ~~that~~ an armed lancet,

Dr. Adams who was at
Montgomery. Called off
and in course of time was in
charge of the land and made after
various little pictures in Adams
view they all pleased Adams
very well and it is about

the same time he began to paint
and in course of time he became
a painter. Adams is a painter
of animals & birds with great skill
and taste in all subjects.

or broken by any other means. Dr Radcliff's method. Bronchotomy.

It is very apt to recur in persons who have once had it. Its prophylaxis consists in avoiding all its exciting causes especially cold feet. Wearing wool in the case, is said to be good.

It protracted it 18 months in a patient of mine Mr Brown. It returned after he has likewise been protracted by laying it aside. It is said to be connected with liver complaint - when it is - they should be removed by the medicines for them, to be mentioned hereafter.

~~are the three last from a London~~
